

LK Valves

Right solution for every system

A valve is never just a valve

We all want to avoid problems if we can. Ship owners want their vessel to perform as expected day after day without costly interruptions. The crew on a ship do not want their daily tasks disrupted by unscheduled, time consuming repairs. In short, no one wants to worry about the performance and durability of a valve, not under normal conditions and even less in an emergency situation.

That is why quality is so important to us and the reason we have chosen to have all parts of the operations under our own roof. We take care of every step of the process; design, development, production, sales, contract management as well as logistics.

Right solution for every system

We offer an extensive range of valves, strainers and actuation solutions for different systems onboard a vessel. Offering valves in various materials and executions, we make sure you can find the right solution for your system. Simplify your work by ordering valves with actuation and accessories mounted and ready to install and to be connected to a valve control or automation system on the ship.

On our website you find Designer's manual, our 24/7 online application tool, that help you select among our products based on system requirements and application. Aveva PDMS users can also download a free 3D catalogue with our products.

Our product range

- Butterfly valves
- Actuators
- Quick closing valves
- Control stations
- Valve monitoring system
- Globe valves
- Check valves
- Strainers & mudboxes
- Gate valves
- Storm valves
- Ball valves
- Self closing valves
- Fire valves
- Safety valves
- Vacuum valves
- Check valves
- Pressure reducing valves
- Discharge flanges
- Diaphragm valves
- Pressure gauge & needle valves
- Plug valves
- Tank vent check valves
- Blind flange valves
- Float valves
- Sounding cock & sounding tube
- Sight glass
- Ejector

- Deep product application competence
- 3D catalogue for Aveva PDMS
- Designers manual – 24/7 online application support
- Worldwide support
- Own production
